## AuditWizard v8 Release Notes (8.1.3)

The following is a list of enhancements and fixes in AuditWizard 8.1.3

## **Upgrading**

This update does not affect the audit scanners so updating to the latest version is very. To update to 8.1.3 all you have to do is double click the executable on the PC or Server where you have AuditWizard installed and follow the prompts. There is no need to rebuild the audit scanners. You must be on AuditWizard v8.1.0 or higher to update using the update patch executable. If you are running an earlier version of AuditWizard please contact your local Layton Technology office.

Do not uninstall AuditWizard prior to upgrading.

Code	Description
415 – Enhancement Reporting	Edit Custom Report  You can now edit custom reports, where previously you had to delete and re-add the report.  Issue Status: Added
417 & 423 - Enhancement Reporting	Schedule Custom & Compliance Reports, plus improved user interface.  You can now schedule custom and compliance reports. In addition, all schedule reports are now created, edited and deleted within single window. Select the Schedule report icon on the main ribbon to schedule reports.  Issue Status: Added
413 – Enhancement Reporting	Once a report is run, it is now possible to drill down further to take you directly to the asset in the network view. This feature is also available from the dashboard view for audit history.  Once you have drilled through on a graph in the reports, you can drill through to the asset in the network view by double click the symbol shown below.
	License Keys by Publisher Microsoft Corporation, Inc.  Drag a column header here to group by that  Installed On Application Na  Double click here in reports  LAYSVR02 Microsoft .NET Framework 3.0 Se  LAY09 Microsoft .NET Framework 3.5 SF  Issue Status: Added

41/ Enhancement	Location Filter
416 – Enhancement Reporting	You can now very easily filter all reports based on the asset location. A Global Location Filter is available on the main ribbon. This setting affects all reports.
	Reports Audit  Schedules  Location Filter  Report Settings
	Issue Status: Added
416 – New Feature Reporting	SQL Server Query Report
	A new advanced option has been added for experienced SQL Server users who are familiar with running SQL Server queries. You can now execute any SQL Server query in the new SQL Server Query Window and save the report.
	Issue Status: Added
New Canned Report	Added new Application Licensing Report. You can expand the report data to show which asset the software is installed on.
	Under software report drop down menu select application licensing report.
	Issue Status: Added
New Canned Report	Added new Audit Trail Report showing changes between audits.
	This new report shows all the hardware and software changes on the asset between audits and is located under asset management reports.
	Issue Status: Added
439 – New Enhancement Dashboard	A new drillable Asset by Type and Manufacture chart has been added.
Dastiboard	The new summary chart is a significant feature in that it gives you an instant snap shot of your IT assets by type and manufacture. You can drill down into the chart to further filter the data and you can even filter by location by selecting the location from the drop down list.
	Issue Status: Added
439 – Enhancement Dashboard	The Calendar / To Do list has now been completely re-designed to be purely a task only list as opposed to a calendar type facility.
	By displaying tasks in a list is easier to manage your day-to-day tasks. In addition, tasks have been moved the ribbon so there is more room for easier viewing.

439 - Enhancement	Tasks  Manage Tasks  To access Tasks click the Tasks icon from the dashboard ribbon.  Please note: If you have any entries in your existing calendar they will be lost when the upgrade is completed. You will be required to re-create them in the new task feature. We apologise for any inconvenience this may cause.  Issue Status: Added  Display asset counts in the network view
Network view asset count	You can now get a quick visual summary of asset counts for each site assets in the network view. This feature was previously available in v7.  Layton Technology PTY LTD (10 items)  Orag a column header here to group by that column.  Location  Asset  Layton  Layton  Layton  Layton  Location  Layton  La
436 – Enhancement Dashboard	Issue Status: Added  Aliasing Operating Systems  You can now alias operating systems.  Issue Status: Added
419 – Enhancement Network view	Add Scanner Type to Network View  Under the network summary the audit status window now displays which scanner type was last used to audit the asset, e.g. AuditAgent, AuditScanner, SNMP etc.  Issue Status: Added
382- Enhancement Dashboard	Aliasing Software Publishers & Enhanced Aliasing of Applications  You can now Alias Software Publishers as well as Applications all from within the Application Licensing tab. This new option is now is a fast effective way to manage multiple applications or publishers with similar names or version numbers.

	Alias Alias Application(s) Publisher(s) Aliasing  To access Aliasing Applications and Publishers select the options via the main ribbon in the Application Licensing tab.  Issue Status: Added
173- Enhancement	Edit Multiple Applications at the same time
Dashboard	You can now edit multiple applications at the same time, such as assigning licenses. Select and highlight as many applications as you want (in the right hand pane) in the Application License Tab, right click and select new license. The new license type will be applied to all applications you have selected.
	Issue Status: Added
418 – Enhancement	Audit History - Export to PDF, XLS on drill down.
Dashboard	When you drill down through the statistics in the left hand pane on the dashboard you can now export the data to PDF, XLS etc.
	Issue Status: Added
421 – Enhancement	Option to hide 'update status' for asset in the Application News Feed.
Dashboard News Feed	By default when the asset was updated, an entry was made in the application news feed. There is now an option to turn off this feature. To change this setting click application news feed properties under the main dashboard.
	Issue Status: Added
364 - Bug	Aliasing of Application causes an incorrect install count in the reports
	When an application was aliased it was causing an incorrect count in the reports.
	Issue Status: Fixed
420 - Bug	Filter report results by asset status
	When an asset was set as disposed the license was still being counted in the reports.
	Issue Status: Fixed
412 – Bug	Server Disk Space chart on the dashboard not refreshing
	There was a bug where the server disk space was not refreshing for other servers on the network when you selected another server from the drop

	down list.
	Issue Status: Fixed
